INFINIA CONTRACTING

ORDER TRACKER

How the purchasing cycle works - one screen for everyone

For Arun (purchaser), Amal (store keeper), Shafeeq (accounts), site engineers **From** Praveen Isaac Shaji **Date** 02/11/2026

From today every request and LPO is followed on **one screen**: **Store & Purchasing > Order tracker**. The old Approvals and Order follow-up tabs are gone - every button they had is on the tracker, so nobody has to look in three places. Each order is one line, and the coloured strip shows the step it has reached:

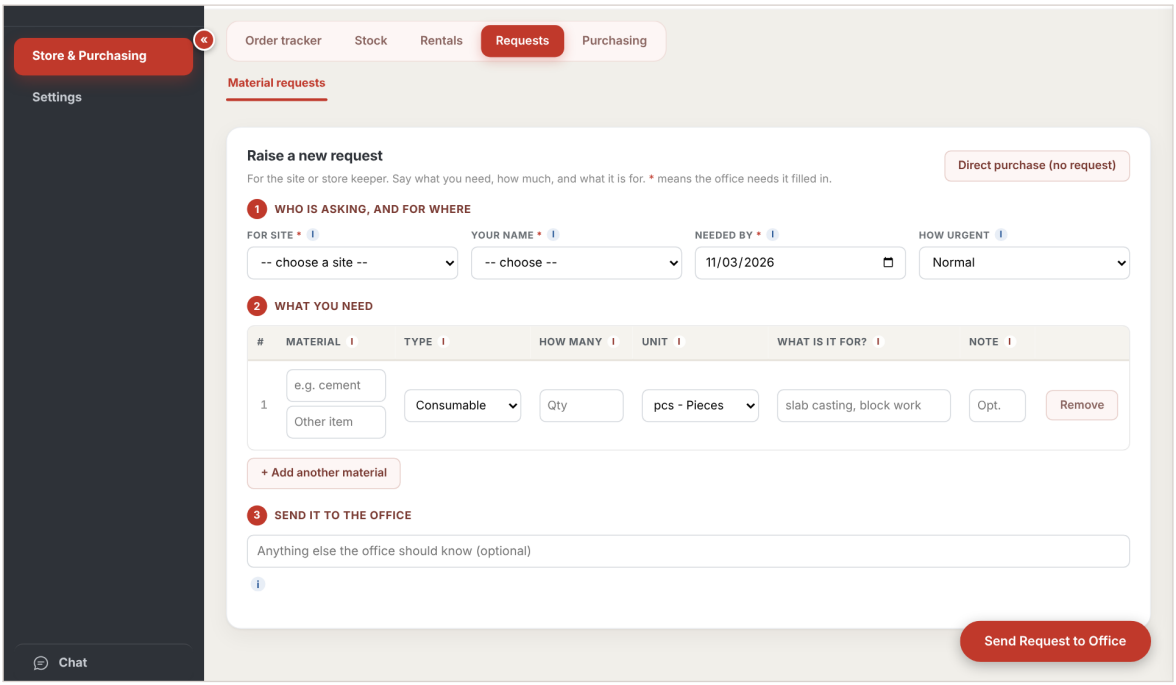

Step	Means	Next is
Requested	the site asked for it	Arun
Approved	Arun approved it (all, less, or some materials rejected)	Arun
Ordered	an LPO is raised - the supplier, contact and phone are on the line	Amal
Arrived	Amal booked the delivery (all or part)	Arun
Bill checked	Arun checked the supplier's bill against the LPO and the DN	Shafeeq
Done	sent to Zoho	-

Colours on the strip: green = on time, **red** = late (past the needed-by / delivery date), **orange** = only part came (**Short** = the supplier sent less, **On hold** = the site asked to hold the rest). **Buttons on a line:** one red button = the next step (Approve, Raise LPO, Book delivery, Check bill, Send to Zoho) and **More** = everything else. Tapping the line opens the same pop-up. **My turn** shows only what is waiting on you; **Late**, **All open** and **Done & closed** the rest. Preview / Export PDF / Export Excel / Share print exactly what is on screen.

1 The site raises a request

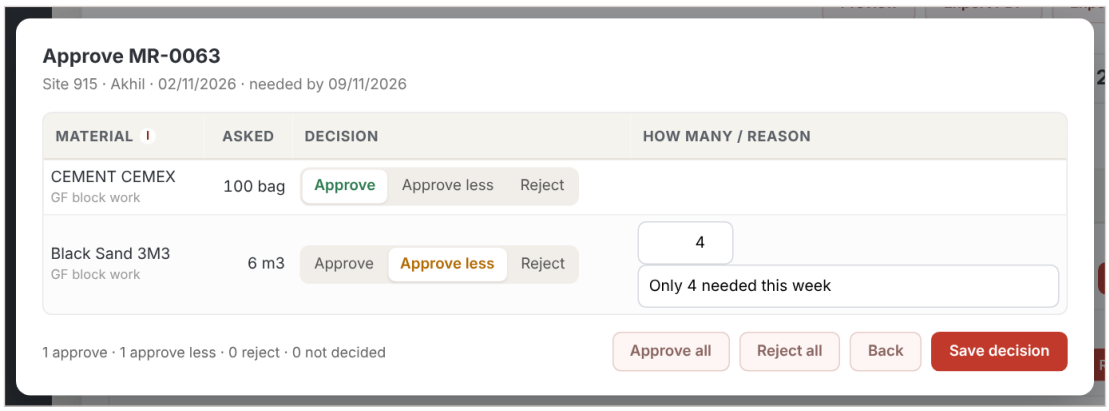

Site engineer / Amal

Store & Purchasing > Requests > Material requests, as before: site, who is asking, needed by, the materials with quantity and what for. It then shows on the tracker at **Requested**, with Arun to approve.

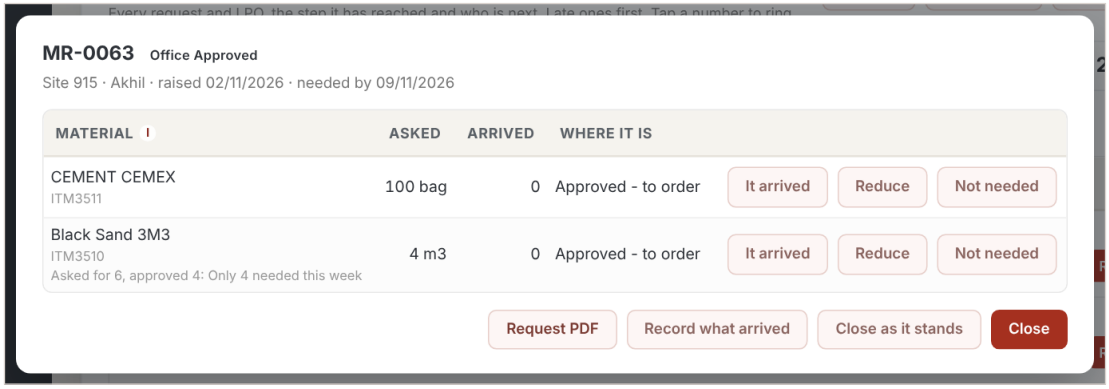

2 Arun approves - all, less, or some rejected — Arun

On the tracker (My turn) press **Approve**. Each material has its own choice: **Approve**, **Approve less** (type how many - the request then asks for that many, the reason is kept) or **Reject** (say why). Approve all / Reject all do the whole request. Save decision.

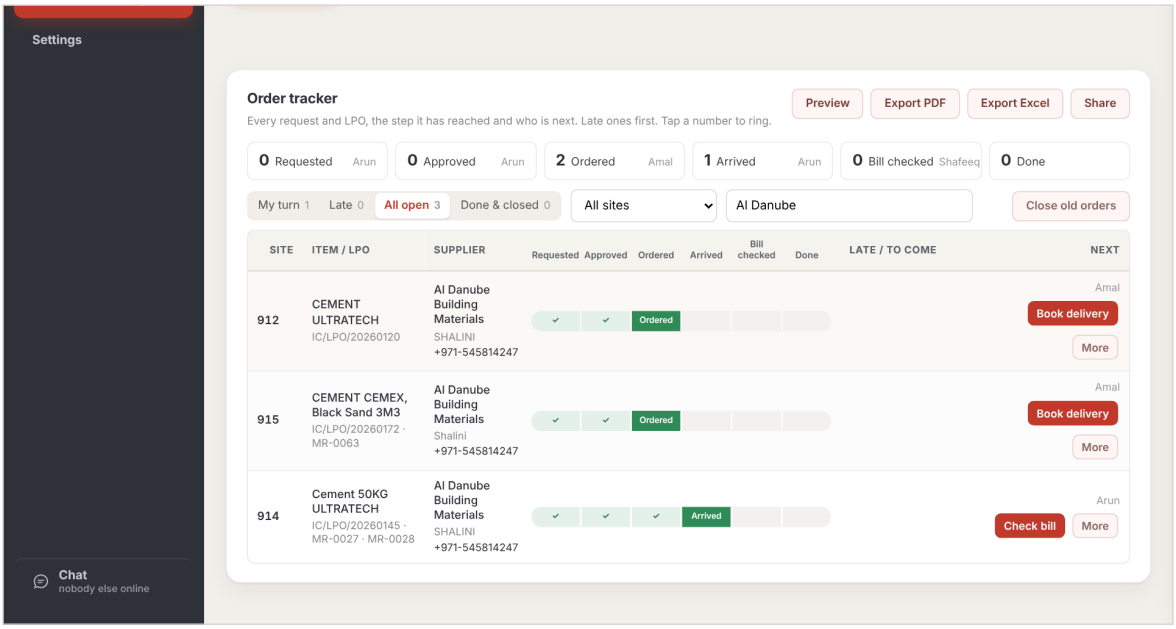

3 One material at a time, any time — Arun / Amal

More > Materials one by one opens the request in full. Every material has its own buttons: **Reduce**, **Not needed** (only that material is taken off - the rest of the request goes on; MR-0061: the solid blocks stay, the hollow ones go), **It arrived** (Amal - it came another way: delivered direct, petty cash, from the store, already on Rentals; a note is asked; no stock is added here), **Add to item list** for a material not on the list yet. If a material is already on a live LPO the button says **Change LPO** instead - it is taken off or reduced there, so nothing stays ordered by mistake.

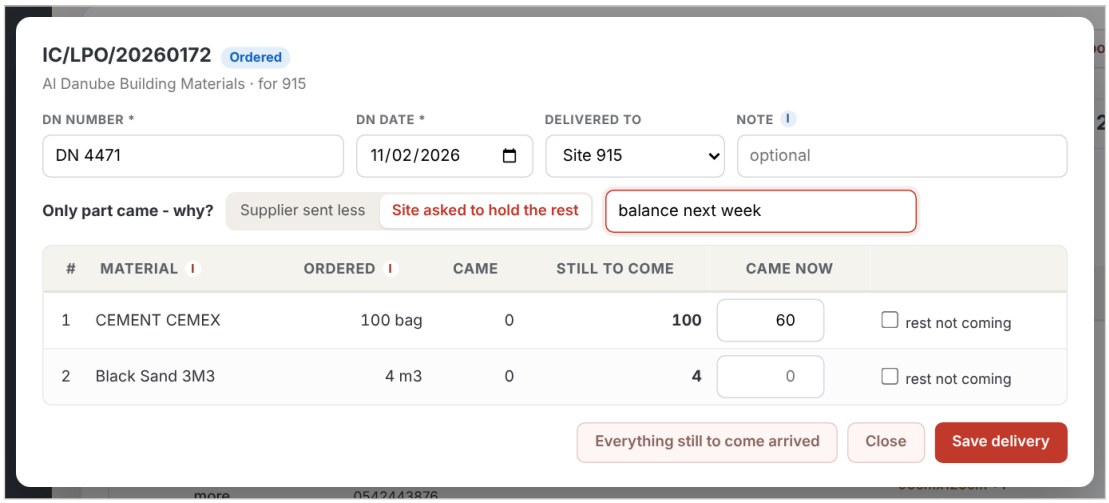

4 Arun raises the LPO — Arun

Press **Raise LPO**: Purchase orders opens with those materials already ticked and the order filled in - check the supplier, the rates and Save & Generate. Materials from several requests going to one supplier: tick them together on the Purchase orders screen as before. The order then reads **Ordered**, with the supplier's contact and number (tap to ring), and Amal is next.

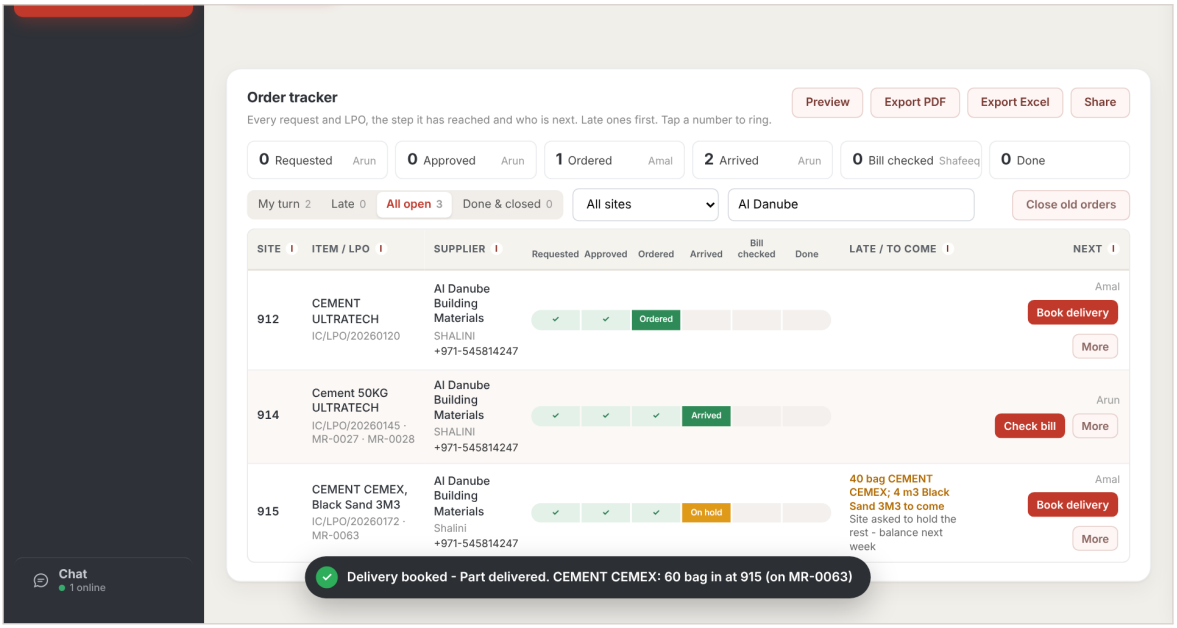

5 Amal books the delivery — Amal

Book delivery: DN number, DN date, delivered to, how much of each line came. Everything: 'Everything still to come arrived'. **Only part came: say why** - **Supplier sent less** or **Site asked to hold the rest**, with a note (balance next week...). The tracker then shows **Short** or **On hold** with the note, so everyone knows whether to chase the supplier or wait for the site. Tick 'rest not coming' when the rest will never come - it is closed, not left to come.

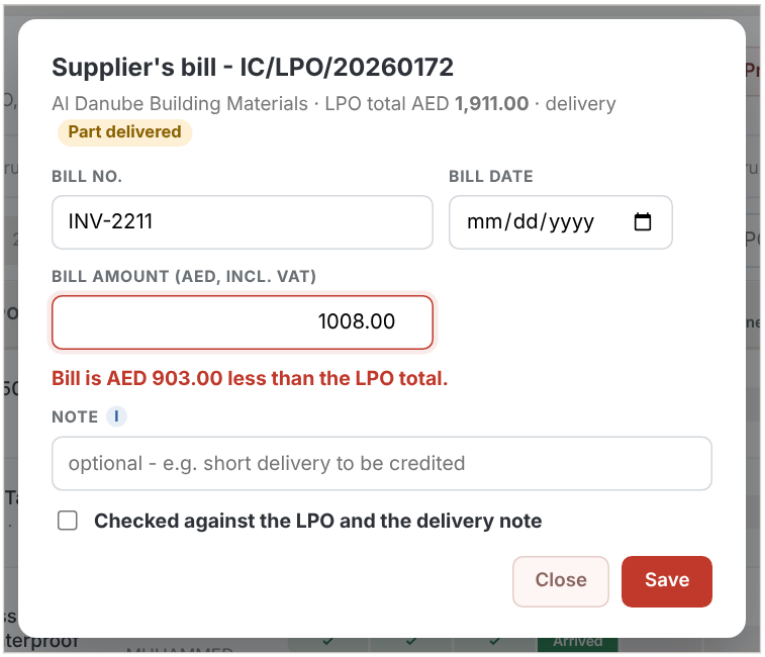

6 What the tracker shows after a part delivery — Everyone

The line reads **On hold** (or **Short**), what is still to come, and the note. **More** has **Close - rest not needed** when the site's requirement changed: the rest is closed with a reason, no stock moves, and the bill to expect is what came.

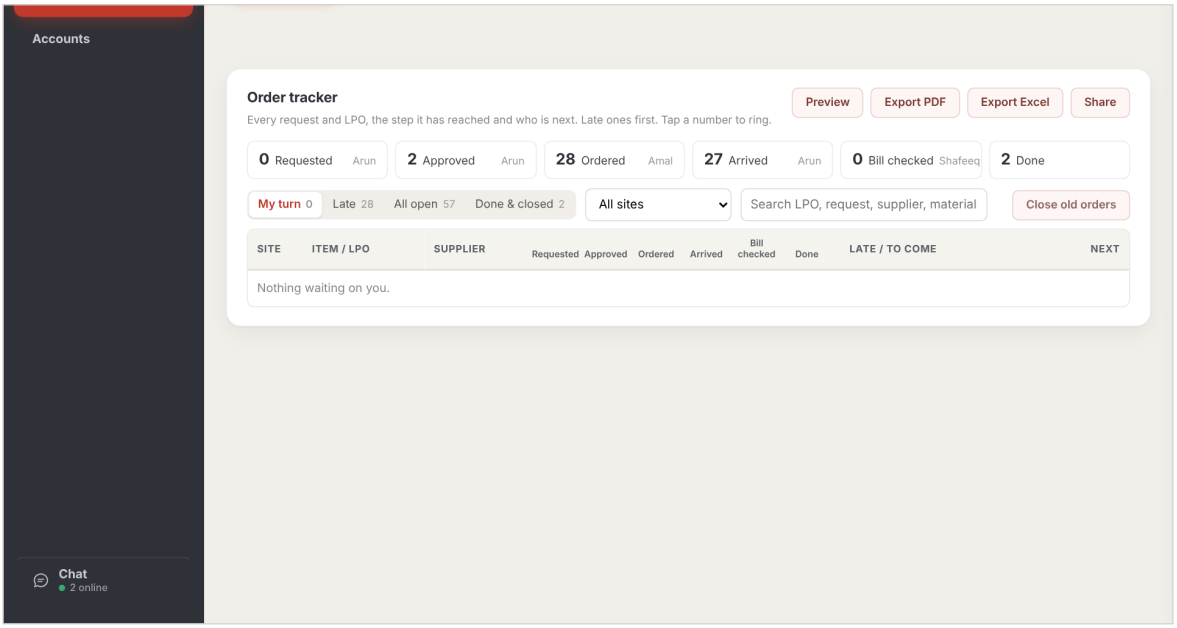

7 Arun checks the bill — Arun

Check bill: bill number, date and amount. The difference to the LPO total is shown at once (round off included). Tick 'Checked against the LPO and the delivery note' and Save. The order reads **Bill checked** and Shafeeq is next. A bill that differs is still saved - write why in the note.

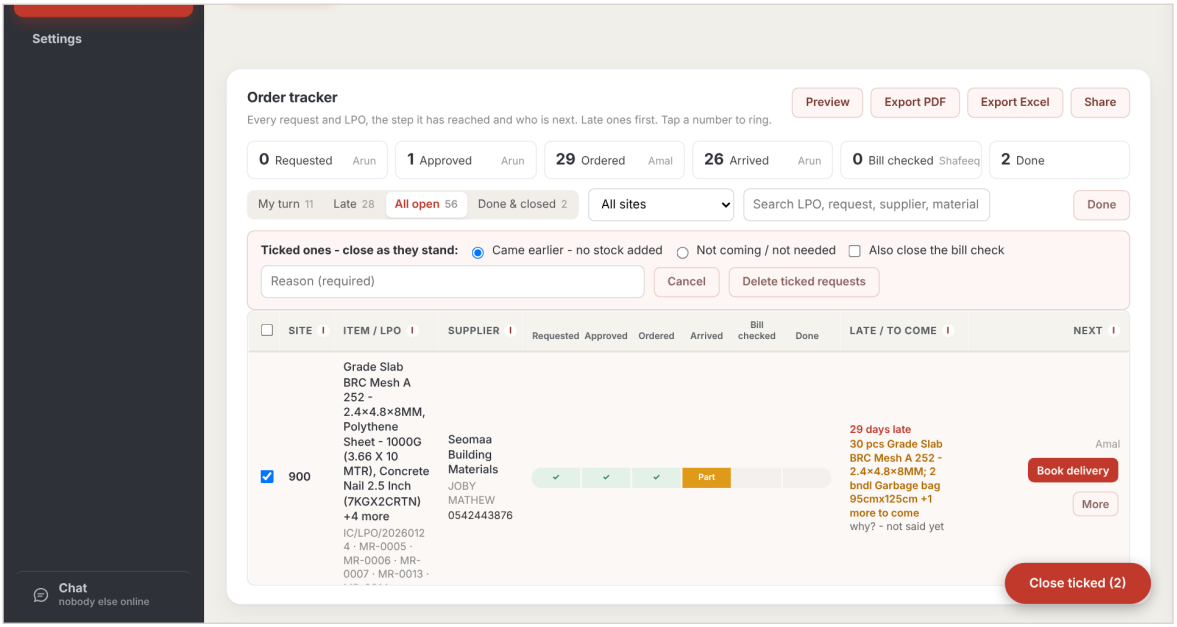

8 Shafeeq sends it to Zoho — Shafeeq

Send to Zoho opens Accounts > Send to Zoho, as before. Once sent, the order reads **Done**. Done & closed lists everything finished, closed or cancelled, with the reason.

9 Old orders from before Arun joined — Arun

Close old orders: tick the ones nobody knows about, choose **Came earlier - no stock added** (it arrived and was used, but was never booked) or **Not coming / not needed**, tick 'Also close the bill check' if the bill is already with accounts, give the reason, Close ticked. **Delete ticked requests** deletes the requests nothing was ever done on. One order at a time: **More > Close as it stands**. Nothing moves in stock, no amount changes - paperwork only, and it is all in the activity log.

Where did the old buttons go?

Before	Now
Approvals: Approve / Reject a line	Tracker: Approve (waiting request), or More > Materials one by one
Approvals: Record delivery (petty cash / no LPO)	More > Record what arrived, or It arrived on the material
Approvals: Add to item list	More > Materials one by one > Add to item list
Approvals: Delete / Delete selected	More > Delete the request; Close old orders > Delete ticked requests
Approvals: Request PDF / Preview	More > Request PDF
Approvals: Show all (closed, rejected)	Done & closed chip
Order follow-up: who to call, late	Supplier column (tap the number), Late chip, red step
Order follow-up: It arrived / Already booked in	More > Materials one by one > It arrived (with a note)
Order follow-up: Edit my request	More > Materials one by one > Edit request (while untouched)
Purchase orders: Generate LPO from ticked	Unchanged - and Raise LPO on the tracker opens it filled

Three rules that keep the figures right. Nothing on the tracker changes stock or money by itself: stock moves only when Amal books a delivery on Material arrived / Book delivery; 'It arrived', 'Not needed', 'Close as it stands' and 'Close old orders' change the paperwork only. A reason is always asked and kept. Anything you cannot find: send me a screenshot and I will point to it.
